Table of Contents

Optics	1
Part I: Geometrical Optics	3
Chapter 1: Outline	5
Paraxial Optics—Refraction & Translation	7
1.1 Introduction	7
1.2 Matrices and Determinants	8
1.3 The Paraxial Approximation and Its Matrix Representation—Paraxial Mathematics	11
1.4 The Gaussian Constants	22
1.5 The Cardinal Points and Planes	32
1.6 The Gaussian and Newtonian Formulations	43
1.7 The Thin Lens Approximation	45
Problems	55
Answers to Problems	58
References	60
Chapter 2: Outline	61
Exact Ray Tracing and Spherical Aberration	63
2.1 Introduction	63
2.2 Skew Ray Description and Vectors	63
2.3 Exact Ray Tracing of Skew Rays	68
2.4 Spherical Aberration	75
Problems	83
Answers to Problems	86
References	87
Chapter 3: Outline	89
Aberrations—Third Order	91
3.1 Introduction	91
3.2 Derivation of the Power-Series Equations	91
3.3 The Paraxial Image Plane	98
3.4 The Five Third-Order Aberrations	99
3.5 Optical Path Length	112
Problems	114
Answers to Problems	116
Chapter 4: Outline	117
Visual Instruments	119
4.1 Magnifying Nearby Objects	119
4.2 Magnifying Distant Objects	126
Problems	133
Answers to Problems	136
References	137

Part II: Physical or Wave Optics	139
Chapter 5: Outline	141
Complex Algebra and Harmonic Waves	143
5.1 Introduction	143
5.2 Complex Algebra	143
5.3 Harmonic Waves	151
Problems	159
Answers to Problems	161
Chapter 6: Outline	163
Interference by Division of Amplitude	165
6.1 Introduction	165
6.2 Introduction to the Michelson Interferometer	165
6.3 Michelson Interferometer: Circular Fringes	166
6.4 Visibility of Fringes	171
Problems	178
Answers to Problems	180
Chapter 7: Outline	181
Fraunhofer Diffraction	183
7.1 Huygens' Principle	183
7.2 Light Falling on an Aperture	184
7.3 Fraunhofer Diffraction by a Single Aperture	185
Problems	196
Answers to Problems	198
Chapter 8: Outline	199
Fresnel Diffraction	201
8.1 Introduction	201
8.2 Fresnel Diffraction by a Single Aperture	201
8.3 Fresnel Diffraction by a Single Aperture that is Rectangular	202
Problems	213
Answers to Problems	214
Index	215
